github.com/uttkarsh-thakur26 | Greater Noida, India

SKILLS

Languages: Python, Java, SQL, C++

AI/ML: RAG Pipelines, Semantic Search, Vector Databases, FAISS, AST Parsing, NLP, Transformers, LLMs, OpenAI API, Multi-Agent Workflows

ML Libraries: LangChain, Sentence-Transformers, TensorFlow/Keras, PyTorch, Scikit-learn, OpenCV, Streamlit, NumPy, Pandas

Backend & Web: FastAPI, Flask, Spring Boot, Spring Data JPA, PHP, REST API Design, React.js, HTML/CSS

Cloud & Tools: Microsoft Azure, Linux, Nginx, Cloudflare, Docker, Git & GitHub, Jupyter Notebook, Google Colab

Databases: PostgreSQL, MySQL, MariaDB, MongoDB, H2, Flyway Migrations

PROJECTS

CodeNav AI | [GitHub](#)

2026

- Built an **AI-powered search tool** that lets a developer ask questions about an unfamiliar codebase in plain English and get back the relevant code, using **large language models** and **semantic search (RAG)**.
- Improved answer quality by splitting code along real function and class boundaries instead of fixed-size blocks, so results come back complete and in context.
- Cut the time to open a codebase from **over 20 seconds to under 0.1 seconds**, a **99.5% improvement**, by saving the search index to disk instead of rebuilding it each time.

BillSync | [GitHub](#)

2026

- Built a **full-stack web application** for splitting group expenses: members log what they paid, and the app works out who owes whom, backed by a **Java Spring Boot** REST API of **16 endpoints** and a **React** and **TypeScript** interface.
- Solved a rounding problem so every split adds up to the **exact total** with no lost fractions, and developed a **settle-up feature** that turns a tangle of debts into the fewest payments possible.
- Designed the **PostgreSQL** database with version-controlled migrations and wrote **73 automated tests**; tuned a slow screen that made **22 database calls** down to **1**.

Knowledge Park Guide | [Website](#) | [GitHub](#)

Sep 2026 – Present

- Built and now operate a **live production website** on a **Microsoft Azure** cloud server, configuring the **Linux**, **Nginx** and **MariaDB** stack by hand and automating deployment with **Python** and **Bash**.
- Orchestrated **multi-agent LLM workflows** for parallel research and **adversarial fact-checking** against primary sources, and built a **Python** pipeline that harvested **1,636 search queries** and used mapping APIs to correct a widely repeated local claim with measured data.

Motion Sensing System | [GitHub](#)

2024

- Built a system that **recognises human activities from live video**, adapting a pre-trained image-recognition model (**VGG16**) rather than training one from scratch, and delivered it as a live dashboard.

RESEARCH & TALKS

Agreement Loops in Multi-Agent Systems | *Seminar Talk, Literature Review*

2026

- Reviewed current research on **how independent AI agents reach agreement** with one another, and presented the findings as a **seminar talk** covering what works reliably today and which problems remain unsolved.

EDUCATION

Bennett University

Aug. 2023 – May 2027

B.Tech in Computer Science and Engineering | **CGPA: 8.17/10**

Greater Noida, India

- Coursework:** Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Deep Learning, Neural Networks, System Design

DAV Public School

Graduated 2022

Senior Secondary Education (Class XII)

Ranchi, India

CERTIFICATIONS

Build Basic Generative Adversarial Networks (GANs) — DeepLearning.AI via Coursera

Apr. 2026

Neural Networks and Deep Learning — DeepLearning.AI via Coursera

Apr. 2025

Machine Learning: Clustering & Retrieval — University of Washington via Coursera

Nov. 2024

ACHIEVEMENTS

Ranked **101st nationally** at **Smart India Hackathon 2024**

CodeChef: 2-star rated | **LeetCode:** Contest rating **1500+**

Competed in **Hackaccino Hackathon**, Bennett University (2024)
